

# Siflex AG Gloss 85

Float glass with single surface micro-etching

**Siflex AG Gloss 85** is a float glass with single sided micro-etching with a high resolution and non-sparkling effect. As it almost completely eliminates annoying reflections, it is excellently suitable for use as a front panel for high resolution display screens and premium displays, i.e. wherever quality and design place high demands on the material and its properties.

According to the application, **Siflex AG Gloss 85** is available with a full range of processing, e.g. edge processed, as single layer safety glass, chemically treated and/or as laminated safety glass with organic and/or ceramic screen printing.
