

Bondings

Transparent bondings

Glass has impressive properties for furniture and lighting production, as well as for showcases and covers, especially as it can be perfectly bonded to other materials. According to the specific requirements and combination of materials, the very latest high-performance adhesives are used.

Bondings by Glaswerke Haller offer a wide variety of possibilities:

- Glass/Glass
- Glass/Metal
- Glass/Plastic
- Glass/Wood.

For architectural applications and use in living areas, special UV adhesives are employed in order to maintain the transparency of the glass.

With high temperature resistant silicone, glass/glass bonds which can withstand continuous temperatures of up to 240° C are possible.

A special feature with Glaswerke Haller:

Our precision production of components is a prerequisite for maintaining the shape of the body after bonding.
