

Ornamental glasses

Structured deflection of light

Glasses with specific surface structures e.g. lines, prisms, dots etc, are used for deliberately deflecting and scattering light.

Glaswerke Haller can supply **ornamental glasses** with all levels of finishing:
in combinations of glass/glass, including combination with matted glass, and glass/plastic.

Ornamental glasses with high light transmission enable greater utilisation of light.

Available thicknesses for monolithic glasses:
4-10 mm
