

# Sicolor®

## Individually printed glass

**Sicolor** includes a wide range of different basic glasses, which are individually coated with organic or ceramic screen printing. State of the art screen printing technology enables even highly filigree motifs to be printed. The printing patterns for the design are created according to your ideas and specifications.

Screen printing is usually carried out on the reverse side. In the case of laminated glass, this corresponds to layer two or three. Multi-colour printing with a barrier layer is possible.

**Sicolor** is used in the lighting and bathroom furniture industries as well as a decorative design element for technical glasses.

**Sicolor** is available with other finishing steps:

**Siplex**® (laminated safety glass) | **Sitherm**® (thermally toughened glass) | **Sichem** (chemically hardened glass) and as curved glass
