

Sirrox

Semi-transparent mirrors

Sirrox is a coated float glass, which offers a wide variety of design possibilities due to its double function: On the one hand there is a defined degree of reflection in front of dark backgrounds, while on the other hand, in front of a bright background **Sirrox** provides all the advantages of a glass with homogeneous transmission.

The semi-transparent mirror effect is also available as single layer safety glass and as laminated safety glass – with screen printing as an optional extra

Technical data

Max. dimension:	2400 x 1200 mm (as single layer safety glass)
	2400 x 1200 mm (as laminated safety glass)

Glass thickness	3.0 - 6.0 mm (± 0.2) (monolithic)
-----------------	---

Light transmission:	63% (± 3)	Further versions on request.
---------------------	-----------------	------------------------------

Visual reflection	35% (± 3)	Further versions on request.
-------------------	-----------------	------------------------------

Colour reproduction index RD 65:	95
----------------------------------	----
